- **Try before you buy – find out if you qualify for one of our FREE trials.**

UK manufacturer, TM Electronics (TME) is the UK's leading designer of handheld thermometers and sensors. Its exciting new range of products and services provide solutions for all temperature requirements in the Food and Drink industry, including affordable food probes and data loggers, a revolutionary range of Bluetooth/Barcode thermometers and a new scheme for more sustainable purchasing and servicing.

New SOLO

The all-new **SOLO** is our popular ergonomic thermometer with easy-to-read display. New advanced features include a super-strong construction on the swing-out probe arm, improved water-resistance and an optional belt holster or wall-mount facility.

Managing Director, Tom Sensier says: *“The handy pocket thermometer you just can't resist picking up, our all-new SOLO is ideal for small to medium food processing operations - from specialty food producers to retail outlets. It's a no-fuss, no-button probe with the accuracy and speed of a much more expensive product.”*

MM7000 Bluetooth/Barcode Thermometers

With the same quality manufacture, high accuracy and speed associated with our groundbreaking **MM2000** series, TME's revolutionary **MM7000** handhelds are equipped with Bluetooth communication as standard and an optional integral Barcode Scanner, providing the unique ability to record, store and communicate **not only** time, temperature and date **but also** the unique identity of any food product or appliance being monitored. Impressive capabilities include storage of up to 1,000 readings before download, open source software and compatible mini Bluetooth printers.

“The MM7000 series brings temperature monitoring fully into the 21st century. With Bluetooth communication as standard and barcode scanning, record keeping for due diligence could not be simpler.”

Thermometer for Life

TME handheld thermometers can now be supported by our new *Thermometer for Life* scheme, challenging the 'throw-away' mentality of existing purchasing and helping managers to spread their costs more effectively. The scheme features a range of environmentally friendly solutions including robust manufacture, rechargeable battery options, sustainable sourcing and a choice of affordable service agreements if required.

“If your organisation is looking for opportunities for a reduced carbon footprint, with all the benefits of greater efficiency and real savings - TME has the solutions.”
