

## Thermometer for Life

July 2010

HEVAR 2010

### **TM ELECTRONICS - TRANS FORMING TEMPERATURE SOLUTIONS London HEVAR 2010 - The Royal Horticultural Halls - 22 & 23 September**

UK temperature experts, TM Electronics (TME) will exhibit for the first time at London HEVAR 2010 at The Royal Horticultural Halls on 22 & 23 September 2010. Visit **Stand 48** to see TME's extensive temperature range for HVACR monitoring – with the focus this year, on legionella risk management. TME manufactures off-the-shelf solutions as well as bespoke designs to satisfy all HVACR temperature requirements.

#### **Key Exhibits**

- **NEW** KS01 Dual purpose surface/immersion probes
- **NEW** MM7000 Bluetooth Barcode Thermometer
- **NEW** MM7010 Bluetooth Logging Thermometer
- MM2000 High accuracy waterproof thermometers
- Robust Handheld Probes and Fixed Sensors
- **NEW** streamlined Wireless Monitoring Systems
- *Thermometer for Life Scheme*

With 20 years experience of temperature applications for HVACR, TME is supplementing its successful range of high quality, accurate thermometers and probes with new designs to satisfy the most stringent temperature safety regulations. At **London HEVAR 2010** TME looks forward to showcasing the newest editions to its **ACOP L8 Compliance** products for legionella control as well as all other HVACR temperature applications.

Look out for the revolutionary **KS01Dual purpose surface/immersion probe** everyone is talking about. A unique 2 in 1 probe compatible with all standard thermocouple thermometers, it enables engineers to measure both pipe surface temperature and water temperature in one simple operation. **Managing Director, Tom Sensier says:** *“Why buy two probes when you can do the job with one? Like all the best inventions this one is much more convenient - it saves you time and money, and still guarantees accurate results.”*

Also, while you are at the show, why not try out TME's **MM7000 and MM7010 Bluetooth** thermometers? These models transform water temperature monitoring for legionella control – as well as the servicing of central heating, air conditioning and refrigeration units. *“With powerful USP's like Bluetooth communication, PDA compatibility, and unique Barcode identification, storage and translation, this range is already turning heads. Add to this TME's 'open-source' approach to software and you have a recipe for transforming temperature solutions throughout the HVACR industry.”*

#### **Thermometer for Life**

TME thermometers are also offered with the additional backing of TME's **Thermometer for Life** scheme – a range of 'green' solutions including robust manufacture, rechargeable battery options, sustainable sourcing and a choice of affordable service agreements. *“Our products represent amazing value for money, offering robust design and low-cost servicing. In this difficult economic climate why not lower and spread your costs by purchasing 'once only' with a guaranteed maximum £35 replacement charge.”*
